Lenovo Product Carbon Footprint (PCF) Information Sheet

PC/Notebook/Monitor/Tablet

Commercial Name	ThinkPad 11e 3rd Gen,ThinkPad Yoga 11e 3rd Gen	
Model Number	20G9,20GB,20G8,20GA	Lenovo
Issue Date	2016-01-28	

Note 1:

All estimates of carbon footprint are uncertain. Lenovo reports the 95th percentile of the carbon footprint estimate to reflect that uncertainty. For this product, that estimate has a mean of 329 kg of CO₂e and standard deviation of 45 kg of CO₂e. Other organizations might report this value as 329 +/- 45 kg of CO₂e. This PCF was generated using the Product Attribute to Impact Algorithm model, Version 12, Date: October,2015 (Product Type: Notebook), © Massachusetts Institute of Technology's Materials Systems Laboratory, August 2012. Please refer to the Intended Uses and Limitations of the PAIA Model, © Massachusetts Institute of Technology's Materials. Link to Document

This calculation was based upon a Lenovo ThinkPad 11e 3rd Gen,ThinkPad Yoga 11e 3rd Gen with the assumptions and configuration described in the calculation assumptions in the next page.

This pie chart provides the percent contribution of the mean value for each element of the analysis for the full life cycle CO₂e impacts of the product. Individual elements displaying 0% are less than 0.5%.

Assumption Table					
Element	Unit	Input	Mean	COV	
Product Weight	kg	Input	1.5	Primary Data	
Form Factor	no unit				
Screen Size	inches	11.6			
Product Lifetime	years				
Assembly Location	no unit	CN			
Use Location	no unit	US			
To country of use: by air	fraction	Input	0.8593	Primary Data	
To country of use: by ship	fraction	Input	0.1215	Primary Data	
To country of use: by rail	fraction	Input	0.0192	Primary Data	
To country of use: by truck	fraction				
In country of use: by air	fraction				
In country of use: by ship	fraction				
In country of use: by rail	fraction	Input	0.5	Primary Data	
In country of use: by truck	fraction	Input	0.5	Primary Data	
Fraction Recycled (remainder to landfill)	fraction	0.8			
Fraction Shredded Recycling (remainder to manual)	fraction	0.77

you need any other country specific information, please contact environment@lenovo.com.

Notes:

Life cycle phases included in the streamlined Product Attribute to Impact Algorithm (PAIA) Life Cycle Analysis (LCA) can be grouped into four categories which include Manufacture, Transport, Use, and End of Life. Below is a brief description of each phase.

<u>Manufacture</u>: This life cycle phase captures emissions generated during the extraction, production, and transport of raw materials, the manufacture of components and subassemblies (including the product packaging) and product assembly.

<u>Transport:</u> Emissions included in the transport phase include all those generated during the air, ocean or land transport of finished or semi-finished Lenovo products between Lenovo facilities and from Lenovo facilities to customers.

<u>Use:</u> In use energy consumption is calculated in accordance with the U.S. Environmental Protection Agency's Energy Star® Typical Energy Consumption (TEC) methodology. Calculated energy consumption is then used in combination with average emissions factors for the designated country of use to calculate emissions.

<u>End of Life:</u> It is assumed that a designated portion of the product (see table above) is recycled at the end of the use period determined in the TEC methodology. It is also assumed that the balance of the product waste materials is disposed of by landfill. Emissions generated during the mechanical destruction, separation and transport of end of life materials are included in the calculation.

Products scope of this sheet includes desktop computer, integrated desktop computer, notebook computer, monitor and tablet. This document is only valid in connection with "THE ECO DECLARATION" of the specific product.
